

UPDATES TO THE WIC FOOD PACKAGE

THE NATION'S PREMIER PUBLIC HEALTH NUTRITION PROGRAM

The Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) is the nation's premier public health nutrition program. Serving roughly 6.7 million low-income women, infants, and children at nutritional risk across America every month, WIC provides nutrition education, breastfeeding support, referrals to health and social services, and a healthy food prescription. The WIC food package provides supplemental foods designed to address the specific nutritional needs of each participant's life stage and unique circumstances.

THE SCIENCE-BASED WIC FOOD PACKAGE

As mandated by the Healthy, Hunger-Free Kids Act of 2010, the United States Department of Agriculture's (USDA) Food and Nutrition Service (FNS) must reevaluate the WIC food package every 10 years. During each iteration of the food package review, USDA has commissioned the National Academies of Sciences, Engineering, and Medicine (NASEM), to conduct this scientific review. Built upon the most recently available science including the Dietary Guidelines for Americans (DGAs), the scientific strength and nutritional integrity of the WIC food package cannot be understated.

The WIC food packages -- grounded in the most recently available science -- have helped

children score higher on the Healthy Eating Index and helped WIC families employ healthier shopping habits. And paired with WIC's clinic-based nutrition services, the monthly WIC benefit brings healthy foods into reach for approximately 6.7 million participants each month.

In 2017, NASEM completed its second ever review of the WIC food package with the central theme being improving balance and choice. Improving the balance and choice of the WIC food package means a food package that is not only more accurately aligned with scientific dietary guidance but also that the WIC food package can better accommodate the dietary, cultural, religious, and individual food preferences of the participant thus better reflecting the diversity of participants across the nation. The new food package rule better ensures effective utilization of food benefits thus improving the nutritional wellbeing of the nation's women, infants, and children.

In November 2022, USDA FNS issued its proposed rule based on NASEM's 2017 report to which the public had until February 2023 to respond and provide public comment. In April 2024 USDA's FNS issued a final rule updating the WIC food package, considering comments submitted from the proposed rule.

IMPLEMENTATION DATES

State WIC agencies will have a 24-month implementation timeline for all provisions; however, for the CVB for all women and children participants, a 60-day implementation timeline has been given. States were already implementing higher CVB rates due to a provision in appropriations law. WIC State agencies must implement other required provisions of this rule no later than April 20, 2026. Below is a high level summary of the food package changes. The table below includes only key updates to the WIC food package and is not a comprehensive list of all changes.

FINAL CHANGES TO THE WIC FOOD PACKAGE: MONTHLY ALLOWANCES
